

T 8222-1 EN

Type 3310 Segmented Ball Valve · Updated edition 2020

DIN and ANSI versions

Application

Rotary valve for throttling or on/off service in industrial applications with high flow rates

Valve size DN 25 to 300 · NPS 1 to 12

Pressure rating PN 10 to 40 · Class 150 to 300

Temperatures -46 to +450 °C · -51 to +842 °F

Special features

Type 3310 Segmented Ball Valve with

- Single-acting AIR TORQUE Type SRP Pneumatic Rotary Actuator
- Double-acting AIR TORQUE Type DAP Pneumatic Rotary Actuator
- Single-acting SAMSON Type 3278 Pneumatic Rotary Actuator ▶ T 8321
- Electric actuator

Valve body made of

- Cast steel
- Cast stainless steel

Segmented ball

- Soft seal
- Metal seal

The control valves can be equipped with various accessories: Positioners, solenoid valves and other accessories according to VDI/VDE 3845 on AIR TORQUE Type SRP or Type DAP Rotary Actuators and Type 3278 Rotary Actuator. Direct attachment of SAMSON valve accessories to Type 3278 Rotary Actuator.

Versions

Standard version for temperatures ranging from -29 to +220 °C / -20 to +428 °F, DN 25 to 300 / NPS 1 to 12

Further versions:

- With packing certified according to DIN EN ISO 15848-1
- With double packing with or without leak monitoring
- With insulating section for a wider temperature range
- With flanges with special faces
- With pneumatic rotary actuator and additional handwheel
- With manual override

Fig. 1: Type 3310 Segmented Ball Valve with AIR TORQUE Type SRP/DAP Actuator

Fig. 2: Cutaway view of Type 3310 Segmented Ball Valve with AIR TORQUE Type SRP/DAP Actuator and positioner

- With heating jacket (on request)
- With additional seals for protection of the bearing
- Version for oxygen service (GOX) up to 13.8 bar

- Two versions for the food and beverage industry and for the pharmaceuticals and biotechnology sector:
 - Valve with gaskets and packings that comply with the EU Regulation (EC) No. 1935/2004 and the US Regulation FDA 21 CFR Section 177.1550.
 - Valve for cleanroom environments: materials (gaskets, packings, body), manufacture of parts as well as assembly conditions in accordance with the EU Regulation (EC) No. 1935/2004 and the US Regulation FDA 21 CFR Section 177.1550.

Principle of operation

In the segmented ball valve, the medium flows through the retainer located on the convex side of the ball. When the valve is closed, the pressure acts on the convex side of the ball. The flow coefficient is determined by the opening angle of the ball.

To reduce the wear on the body when controlling abrasive media, the direction of flow ¹⁾ can be reversed.

Fail-safe position

With the Type SRP and Type 3278 Rotary Actuator the control valve has two fail-safe positions which become effective when the pressure acting on the piston or diaphragm is reduced as well as when the supply air fails:

- **Fail-close valve:** The actuator springs cause the segmented ball valve to close when the supply air fails.
- **Fail-open valve:** The actuator springs cause the segmented ball valve to open when the supply air fails.

The Type DAP Rotary Actuator has no springs. The control valve must be fitted with special accessories to enable the valve to move to a defined end position upon supply air failure.

Valve characteristic selection

The design of the segmented ball allows the same valve to be used with two different types of flow characteristic:

- **Equal percentage (standard)**
- **Linear**

The actuator turns clockwise to close the valve (looking from the actuator toward the valve).

¹⁾ Standard direction of flow = FTO, reverse direction = FTC

Type 3310 Segmented Ball Valve with Type 3278 Actuator and handwheel

Order numbers

Valve size	DN .../NPS ...	Rotary actuator	Type SRP (AIR TORQUE), Type DAP (AIR TORQUE) or Type 3278
Pressure rating	PN .../Class ...	Fail-safe position	Fail-close or fail-open
Body material	Refer to Table 2	Supply air	... bar
Gasket	Metal or soft seal	Operating range	Number of springs or bench range
Characteristic	Equal percentage or linear	Valve accessories	Positioner and/or limit switch
Direction of flow	Standard or reverse
